## VSWIR

	<b>Spatial</b>	<b>Temporal</b>	<b>Spectral</b>
SBG Baseline	30-m	16 days	0.38– 2.5 $\mu\text{m}$ 220 bands
EMIT	60-m	Variable	0.38– 2.5 $\mu\text{m}$ 285 bands

# SBG

## TIR

	<b>Spatial</b>	<b>Temporal</b>	<b>Spectral</b>
SBG Baseline	60-m	3 days	3 – 12 $\mu\text{m}$ 8 bands
ECOSTRESS	70-m	Variable	8-12.5 $\mu\text{m}$ 5 bands

# How have Applications Contributed to SBG Mission Concept?

**Mission Architecture**  
synergize research and applications  
(SATM)

**Mission Requirements**  
research and applications informed  
(hardware, latency)

**Community Engagement**  
application ready products and data systems  
(SISTER, SHIFT)

# 2 Unprecedented Studies on the Impact and Value of SBG

560+

individuals surveyed

94

Interviews across 11 thematic areas

Fire Ecology & Risk

Agriculture & Water resources

Algal blooms and WQ mapping

Mineral resource mapping

Urban & Health

Forest Management

Coral reef ecosystems

Global food security

Conservation & Biodiversity

# Forecasting Algal Blooms in Lake Atitlan <sup>1</sup>

Available at: <https://freshwater.net/>

This system forecasts daily probability of algal bloom formations in Lake Atitlan. A biodiversity and cultural landmark in Guatemala, Lake Atitlan is the second most visited site in the country.

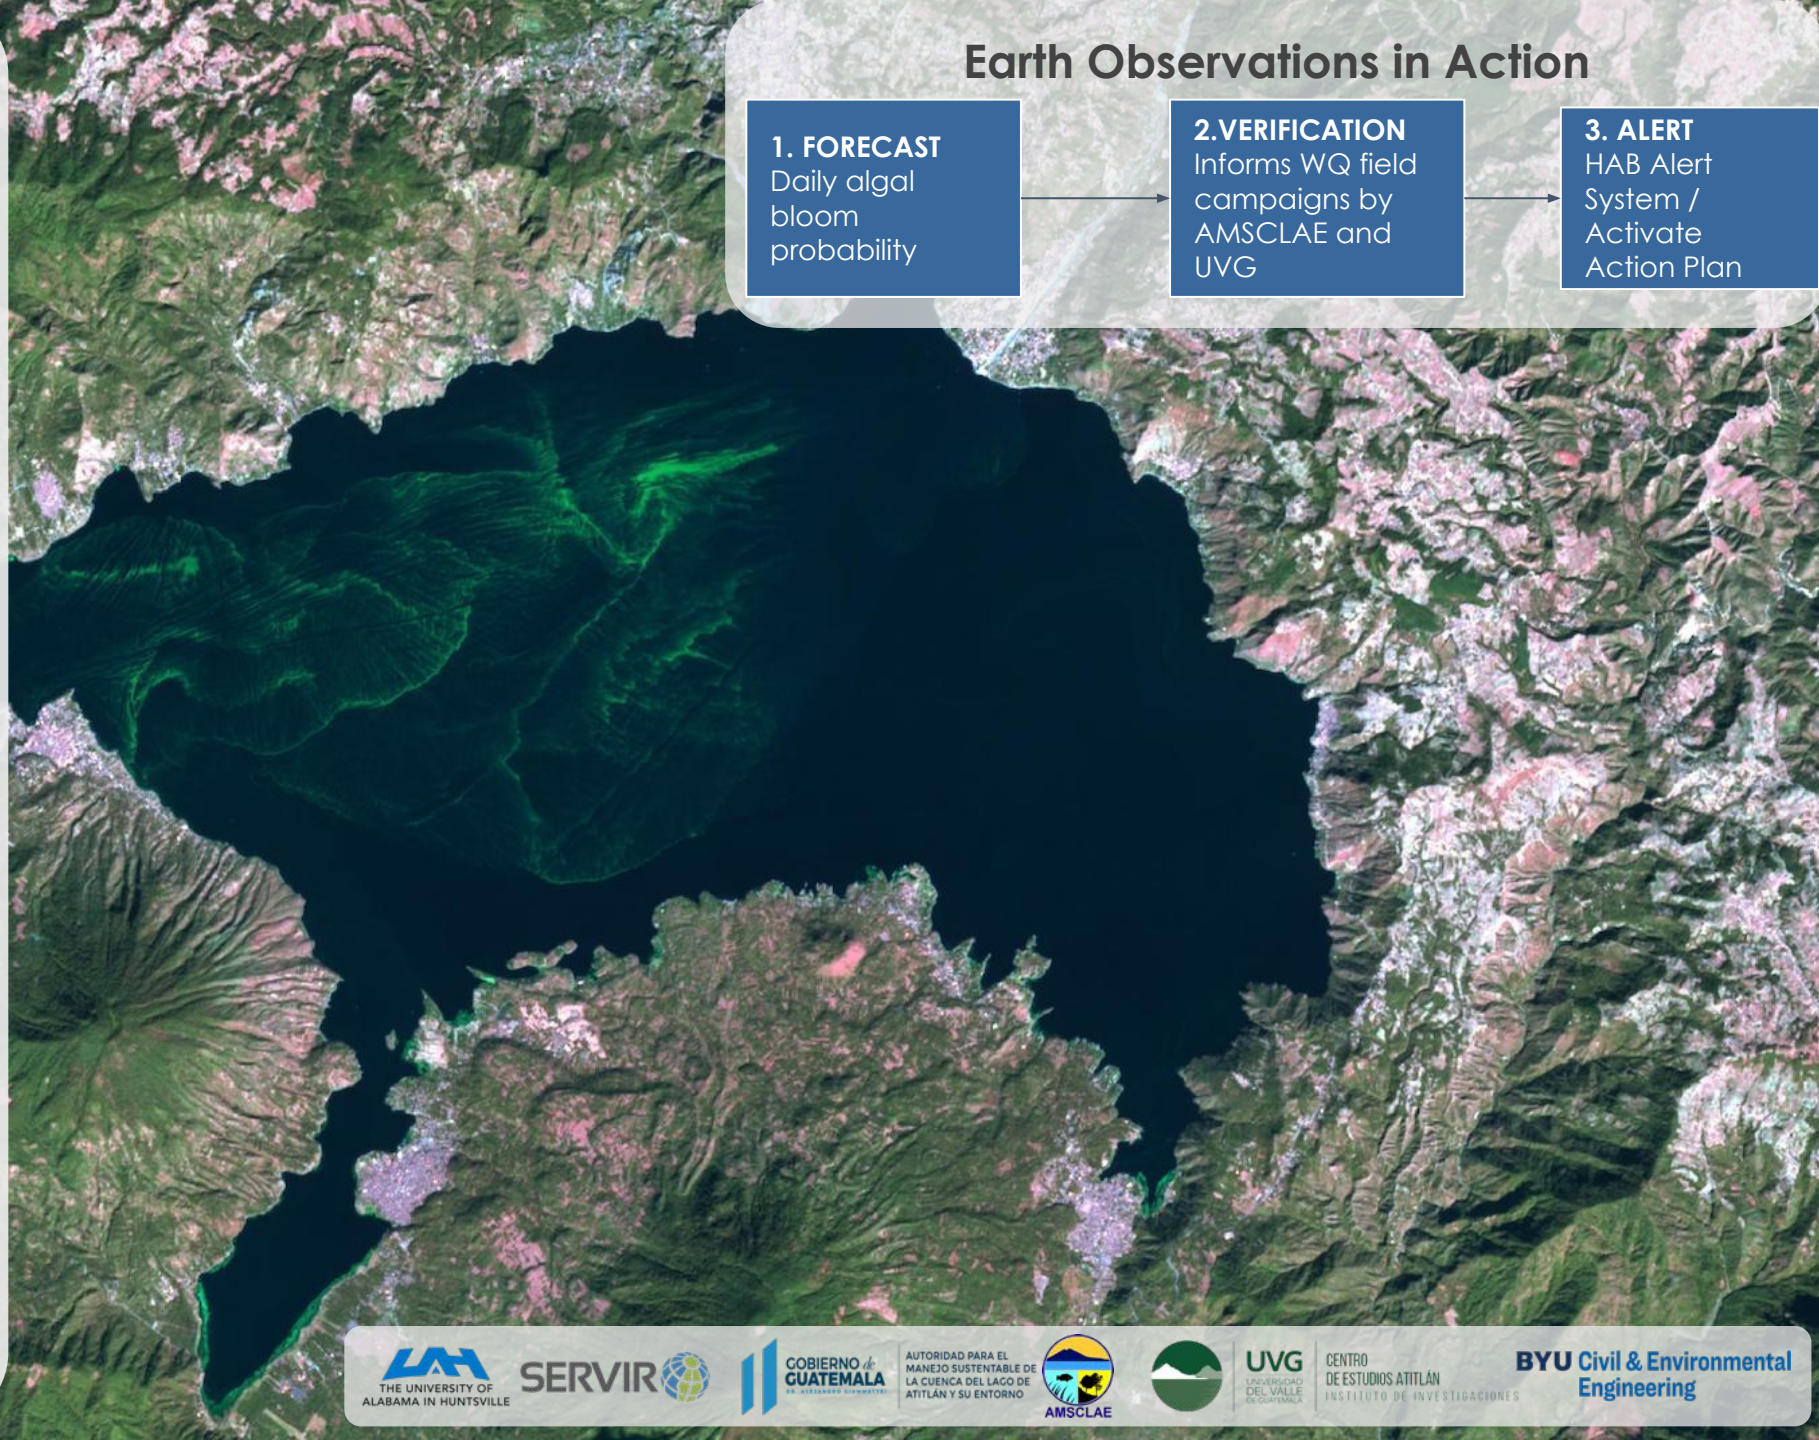

This forecasting system is a key input into the Lake Authority's Harmful Algal Bloom (HAB) Alert System. A new algal bloom was detected in late August 2022 as a result of the information provided by this forecast.

A key input into the forecast model is GEOGloWS<sup>2</sup> ECMWF streamflow data.

The web platform also provides daily information on the lake environmental conditions to inform authorities about conditions for field campaigns.

<sup>1</sup> This project was supported by National Geographic and Microsoft.

<sup>2</sup> GEOGloWS is supported by CNES, NASA, World Bank, Microsoft, BYU, NOAA, the Swiss government, with additional in-kind contributions from ECMWF, JRC, BYU, USAID-NASA-SERVIR, Esri, and many national hydromet agencies.

## Earth Observations in Action

# SBG Science and Application Technical Interchange Meeting

Please join us!

- **Washington, DC May 29-31st**
- NASA HQ and Hyatt Place Washington DC
